

HumanProgress

In the middle ages, China was the pinnacle of global civilization, leading the world in technology, infrastructure, and commerce. Some even claim it was on the cusp of an early industrial revolution.

What went wrong?

In short, the Ming dynasty imposed stagnation in pursuit of stability. Today's governments should take note.

Why isn't everyone poor, sick, and hungry?

After all, that's how we started. Poverty is the default state of humanity.

In his book, *[From Poverty to Progress](#)*, Michael Magoon pinpoints five "keys" that he claims unlocked progress throughout history and across cultures.

As birth rates fall around the world, many policymakers are considering new and expensive programs to encourage procreation. But is social spending the best way to increase fertility?

This week, our managing editor Chelsea Follett joined other experts to discuss her [recent research](#) that suggests supporting families means getting the government out of the way.

[Watch the discussion here.](#)

It is a great tragedy for human flourishing and prosperity that billions of people live in cultures that discourage or prevent innovation.

Thousands, perhaps tens of thousands, of potentially world-changing entrepreneurs remain inactive because they are forced to live in places with little cultural capital.

Put differently, culture is the soil and the entrepreneur is the seed.
